

## AQC-1C Reflex Sight

### The All-In-One Reflex Sight

- *New standard of Accuracy*
- *Designed for all shooting scenarios*
- *Faster target acquisition*
- *Battery conservation mechanism*

#### Unique fighter friendly features

- Three built-in reticles
- Remote PTT cable
- Hand-adjustable zeroing knobs
- Sleep mode/sleep mode deactivation
- Motion sensor
- Extremely light weight

## Setting New Standards of Accuracy

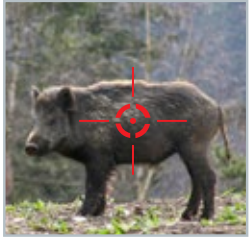

For the first time, ease of use and tactical operability have been brought together in the newly released AQC family of reflex sights. Now, hunters, military and paramilitary alike can benefit from the sights' user friendly features.

CEO of MSE, LTC. (Res.) Mikey Hartman, founder and former commander of IDF Marksmanship and Sharpshooting school for the last two decades, has created the AQC (Accurate Quick "Chot") family of sights.

AQC series of reflex sights set a new standard of accuracy. The sights are parallax free and use a uniquely sharp reticle, thus enabling faster target acquisition and higher accuracy, maximizing your shooting ability to its highest level.

AQC-1C is a unique All-In-One reflex sight built for the most challenging shooting scenarios.

Short Range

### Quick & Accurate Shooting

The AQC-1C reflex sight is uniquely designed with three built-in reticle options, allowing the shooter to choose between one reticle for quick shooting in urban terrain, a second reticle for accurate shooting in open terrain and a red dot for shooter's preference.

Switching between reticles is easily accomplished at the press of a button on the PTT (Press To Transmit) cable, located on the gun's grip, or by pressing the right activation button, located at the rear of the sight.

Long Range

### User Friendly

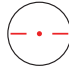

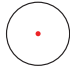

When using the remote PTT cable, the shooter can easily activate the sight, select the required reticle option, and control the brightness level - all without letting go of the weapon's grip. Also, zeroing is accomplished with hand adjustable knobs, requiring no tools.

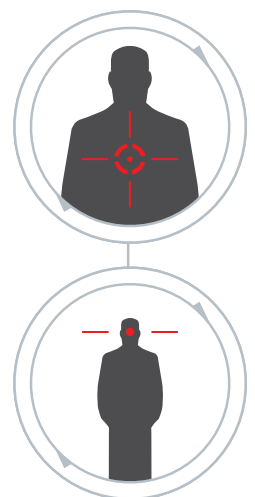

### Day and Night Compatible

The AQC-1C reflex sight's unique night vision mode allows the shooter to attach any night vision device without "blinding" the NVD. The sight uses eight different brightness types - four for day and four for night scenarios.

### Extended Battery Life

When the AQC-1C reflex sight is not in use for 30 minutes, it automatically switches to sleep mode in order to prolong battery life. Always ready for action, an integral motion sensor mechanism automatically reactivates the sight when it's time to act. When needed for ambush scenarios, the sleep mode can be deactivated.

Features	AQC-1C		
Magnification	x1		
Weight (operational ready, knobs adaptor)	310g		
Weight (operational ready, quick release adaptor)	327g		
Body composition	Composed reinforced polymer		
Reticle type	Quick Shooting 	Accurate Shooting 	Red Dot 
Field of View	Unlimited with both eyes open		
Window area	850mm <sup>2</sup>		
Operation time (reflex sight)	1875 hours		
Battery type	Single CR123		
Window size (H x W)	25mm x 34mm		
Dimensions (H x W x L)	60mm x 49mm x 127mm		
Center dot	5cm at 100m/1.7 MOA		
Integral adaptor	Quick release/ Knobs		

### About MSE

MSE (Marksmanship, Sniper, Excellence) Ltd., develops, manufactures and markets innovative user-friendly Day sights and a unique Night vision sight to the civilian, military and paramilitary markets worldwide. MSE offers tailored "Train the Trainers" shooting implementation courses, theoretical and practical, maximizing its clients shooting skills to their highest level. MSE is a subsidiary of Star Defense Systems Ltd. (SDS Group).
